

Cycling on the footway - international examples

Our research has found that the UK is in a minority of Western countries who have a law prohibiting cycling on the footway (Table 1).

Several countries prohibit cycling on the footway but have exceptions for children. For example, in France and Belgium children under the age of 8 are allowed to cycle on the footway, whilst in Germany and Finland children aged up to 10 and 12 respectively have the same benefits.

Japan and the Australian state of Victoria are the only two countries/regions that appear to have laws explicitly permitting cycling on the footway by disabled people. The government of **New Zealand** is also considering proposals for changes to road rules to allow cycling on the footway by disabled people.

Case study - Japan

Japan's <u>Traffic Safety Guidelines</u> state that, in principle, cyclists should ride in the street and use the footway "only in exceptional cases". One of these exceptions stipulates that:

"Children under 13, adults 70 and over, and people with physical disabilities are permitted to ride a bicycle on the sidewalk"

Case study - Victoria, Australia

In the Australian state of Victoria, <u>laws</u> state that you can cycle on the footway if you are:

- Under the age of 12
- Are an adult supervising a child under 12
- Have a disability that means it's difficult for you to cycle on the road

Disabled cyclists must be able to show police a medical certificate if they are asked.

Case study - New Zealand

In 2016, a <u>petition</u> put forward by Jo Clendon asked the government to change road rules to allow cycling on the footpath by young children (and parents riding with them), adults over 65, and people with mental or physical disabilities.

In response, the New Zealand Transport Agency conducted extensive <u>research</u> into the various options around footpath cycling. Amongst its recommendations were:

 For people using 'mobility trikes' to be allowed to use the footway, "in the same way as others using mobility aids, to maintain their independence and mobility"

• To change the definition of a Mobility Device to include devices that use human power, including mobility trikes

The Transport and Industrial Relations Committee has subsequently published a <u>report</u>, in which it recommended that the government change its road rules in order to:

"Allow cycling on the footpath by children up to and including 12 years of age or year 8 (and accompanying adults), seniors over 65, and vulnerable users (such as those with mental or physical disabilities)"

Table 1: Laws on cycling on the footway in selected countries

Country	Prohibited	Prohibited with exceptions	Child cyclists allowed	Disabled cyclists allowed	All cyclists allowed
UK					
Ireland					
Netherlands					
Sweden					
New Zealand					
France					
Belgium					
Germany					
Finland					
Australia (New South Wales)					
Japan*					
Australia (Victoria)*					
Australia (several states)**					
USA (several states)**					
Norway**					

* There are rules/regulations that explicitly permit cycling on the footway by disabled people

** Cycling on the footway is permitted to all cyclists, and so an assumption has been made that this also applies to disabled cyclists (even though this might not be explicit)
